1. START

A. Country (United States) is selected by default (no empty field). The country field shows only 2 countries: US and Canada.

United States ▼

United States
Canada

B. ZIP Code field is empty. Add ">" button that user is required to click to calculate the shipping and taxes. If the ZIP Code field is empty, show ">" grayed out (disabled).

C. If ZIP Code is not entered, show \$0.00 for "Shipping (US Standard)" (for Canada either show average flat rate for standard shipping or "\$_._"). Remove expand/collapse functionality – no down arrow.

D. If ZIP Code is not entered, show "_._" for "Tax".

Important: do not show "\$0.00", which may imply zero tax. Dashes are better communicate that the tax wasn't estimated yet.

C ▲ **Change Shipping Method:**

Standard Shipping (3-7 Business Days) \$0.00

Expedited Shipping (2-3 Business Days) 51.06

Express Shipping (Next Business Day) 92.34

2. ZIP CODE ENTERED

A. When a user enters valid ZIP code, the ">" button becomes active (color). Clicking on the ">" will calculate the taxes and shipping costs.

B. The country and input fields are replaced by input summary info (non-clickable text) and CTA link "Change" CTA that allows to edit country or ZIP info.

C. Only when ZIP Code entered, show down arrow that opens Shipping options layer with more shipping methods, where "Standard" is selected by default. **Note:** Replace the "Shipping" label with CTA "Change Shipping Method:" when the shipping options container is expanded.

3. CHANGING ZIP CODE

If the user wants to change (or correct) already entered ZIP code, s/he can click on the "Change" link to bring back country and ZIP input fields.

The form shall "remember" previously entered data (country/ZIP) so the user can check accuracy of that info.

If the user erases the previously entered ZIP code and leaves the input field empty, display the field error and a message "Please enter valid ZIP Code." (and disable ">" arrow that allows to recalculate the taxes and shipping). Tax field below (in the Subtotal) will show estimated tax for the initially submitted ZIP code. The error message shall remain until the user enters necessary info.

Note: This error message will communicate to the user that the tax/shipping info may not be accurate, until the error is corrected by the user. This way we can work around this issue of remaining (i.e., "left over") tax amount.
